

ADELPHI GOES TO THAILAND

Adelphi Manufacturing will be present at Propak Asia 2003 in Bangkok, Thailand for the first time this year.

The exhibition which is at the Queen Sirikit National Convention Centre runs from 28th -31st May 2003 – 10.30 -1900 hours.

On stand number K2 in the Plenary Hall *Adelphi* will be showing, for the first time in Asia, their new **Response** filling machine, a worthy successor to their famous **Centrair** brand. The **Response** is a semi automatic air operated machine which uniquely, is capable of handling all types of products from spirituous liquids to heavy pastes on the one 316 stainless steel head.

This head is supplied with a connection for a hopper feed for viscous products, or for a stand pipe feed for liquids. Volumes from 5 - 1000ml are standard and all controls are within easy reach of the seated operator.

Suitable for use in all industries where accuracy and cleanliness are essential, particularly filling in the pharmaceutical, cosmetic and food areas the **Response** is selling more than twice as fast as its predecessors.

Additionally *Adelphi* will have the **Peristaltic and XY Distributor** on view which enables the unattended filling of small volumes of liquids into containers in trays.

The **AC1000** and **Apollo 1** machines will complete the display. The **AC1000** is a new tablet counting machine with infrared counting technology and therefore not upset by differing light intensity in different parts of the world. An optional de-duster attachment is now available. Counting all tablets and capsules it will operate up to 1000 counts per minute.

The **Apollo 1** is a polarised light liquid inspection station widely used in manufacture and dispensing areas for pharmaceutical liquids to check for particulates in the container.

Adelphi people will be on hand also to discuss projects and larger machines supplied by *Adelphi* – the **Cerberus** filling stoppering and capping machine – machines for Tube filling and sealing – and in line Flow Meter technology filling lines for high speed production.

Finally *Adelphi Coldstream* and *Adelphi Tubes* well known European suppliers of Stainless steel hollowware and Healthcare Packaging will be taking enquiries.
