## Innovations on the Adelphi stand: 3 New Machines for PPMA 2003!

HAYWARDS HEATH, WEST SUSSEX – June 6<sup>th</sup> 2003 - Adelphi Manufacturing announced today their range of machinery to be exhibited at this years PPMA exhibition. A key theme on the Adelphi stand is innovation, with 3 new machines seen for the first time in the UK.

### 1 The Adelphi Response semi-automatic filling machine

Over 30 of these machines have been sold since its launch last year. A range of accessories has now been developed to make the machine even more versatile. On show at PPMA 2003 will be the **new spinning table with diving nozzle**. This enables creams to be filled into jars whilst eliminating air pockets. The operator places a jar in the pocket on the table and presses two start buttons (for safety): the jar then rotates and the product is filled via a diving nozzle connected to an Adelphi Response filling machine. Four of these units have already been bought by a leading branded cosmetics manufacturer.

## 2      **The New Rota FLR-50/S vial filling and screw-capping machine**

Rota, of Germany, are a leading manufacturer of vial and ampoule processing machines, and are represented in the UK and Ireland by Adelphi Manufacturing. The **new FLR-50/S vial filling and screw-capping machine** will be seen for the first time in the UK at PPMA 2003. Aimed at pharmaceutical markets, this PLC-controlled machine will fill and cap vials at up to 3000 per hour. Capping is driven by servo-motors so the torque can be set very accurately, and applied very consistently.

## 3      **The Stoppil EC6050 in-line automatic filling machine, with electromagnetic flowmeters**

Stoppil Industrie, of France, are a leading manufacturer of flowmeter based liquid filling machines, and are represented in the UK and Ireland by Adelphi Manufacturing. Their **EC6050 6-head, in-line automatic filling machine, with electromagnetic flowmeters** will be seen for the first time in the UK at PPMA 2003. Aimed mainly at cosmetics, food, and chemical applications, this machine offers the benefits of versatility and flexibility (fill volumes from 250ml to 20L are possible on the same machine), with easy cleaning and very fast changeovers between production runs with no change parts.

Other machinery being shown by Adelphi at PPMA 2003 includes:

- Automatic **tube filling machinery** for metal and plastic tubes, from **TGM** of Italy. This year we are featuring a machine with hot-air sealing.
- The **Adelphi Peristaltic Pump and XY Distributor** for automatic filling of small containers.
- A wide range of **bench-top equipment** including: tube sealing and coding, capping and crimping, ampoule and vial inspection.
- Our range of **pharmaceutical quality stainless steel products**, including storage and mixing containers, scoops and utensils.
